

First Sign® Precision Wellness

An Integrated Officer Wellness Software Solution

Officer wellness is at the epicenter of excellence in law enforcement, yet in many agencies, fewer than half of officers voluntarily engage with wellness resources.

With First Sign Precision Wellness, Benchmark Analytics is focusing on the health and well-being of today's law enforcement officers. We've developed the only research-driven platform that delivers officer-specific insights and provides recommended wellness interventions.

First Sign Precision Wellness is the *Only* Solution for Proactive Wellness & Research-Proven Interventions

Other wellness tools rely on an opt-in approach, where general wellness content is made available only to those who self-select. Until now, no one has built a holistic solution that proactively identifies officers in need and provides research-based, proven interventions and support — including support of supervisors and command staff to engage in important, life-changing wellness conversations

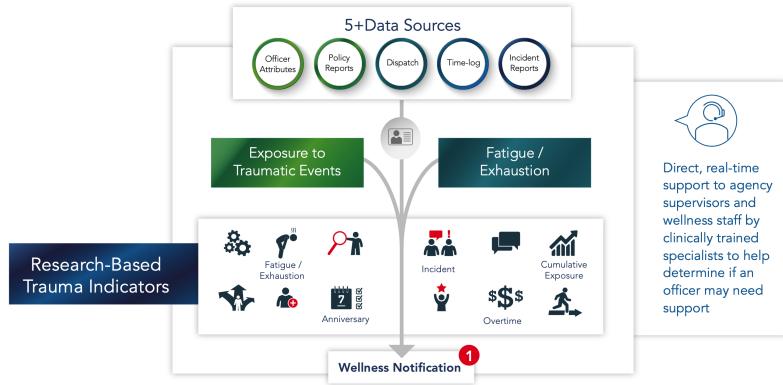

First Sign® Precision Wellness

An Integrated Officer Wellness Software Solution

1 Identify Those in Need

Who is in Need?

Advanced data science analysis that identify which officers may need help most.

2 Build the Plan

Build a Wellness Culture One Conversation at a Time

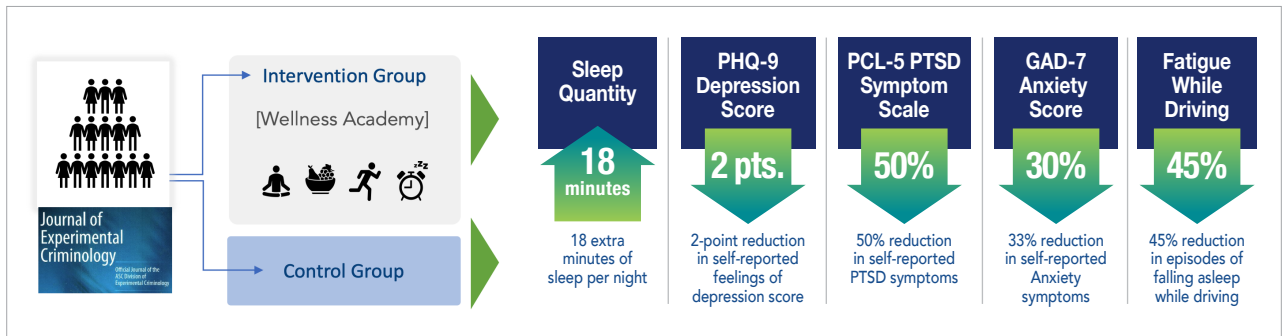

- Facilitates custom wellness plan for each employee.
- Step-by-step online planning that employees can self-initiate or walk through with a supervisor / peer support.
- All with the optional support of clinically trained specialists available 24/7 to support and guide conversations.

3 Support Resilience

How to Help Officers with Tools that Work

A research-based wellness framework informs our content and interventions that impact on officer health and well-being, and have been proven to have a positive, statistical effect.
